# USING A PAPER PREVIEW IN
# DOCUMENT MANAGEMENT APPLICATIONS

## ABSTRACT

5        A method of using a document management application to update a user interface for

a printer.  The method includes scanning the paper from a paper tray of a printer and

accessing the resulting scanned image from a document management application.  The

document management application will then allow the scanned image to be associated with

the paper tray and the user interface updated to reflect the new information.
